

Enrollment Period for Future Broadband Connections

Anyone wishing to connect to Town Broadband in the future can arrange an immediate connection on their own, at their own cost, with the approval of the Selectboard, otherwise, you must notify the Selectboard between January 1 and January 31 of your desire to connect in that year. The Selectboard will make every effort to provide service to new subscribers as soon as possible, however installation and commencement of service depends on the time required for make ready and licensing as well as the availability of contractors to complete the work. The Town will begin the installation process after January 31 for that year. All new homes will need schedule 40 stick conduit, underground from the house to the main road. Existing homes will be installed in the same manner as homes already connected-either aurally or in existing undergrounds or plowed in. You must notify the Selectboard in January of your desire to be hooked up to the fiber optic network for that year. Any proposed connection will require \$300.00 and a three year agreement for payment, year-round.
